

Anastasiia Fedko

Front-end developer React.js / Next.js

📍 Poland, Krakow (CET)
✉ ana.i.fedko@gmail.com
☎ +48 731 355 793

Years of experience:

React.js/Next.js: 5+

Education:

2018 - 2020	IT Step Academy
2019 - 2020	Training center by Freshcode
2011 - 2012	Dnipropetrovsk State University of Internal Affairs Law and Justice Master's degree
2008 - 2011	Zaporizhyya Institute of Law under the Dnipropetrovsk State University of Internal Affairs Law and Justice Bachelor's degree

Professional experience:

08/2020 – present
The Evenstar, Ukraine
React, 3D graphics developer

Main projects:

NDA project - a social mega app for creators, members, and brands. It combines traditional social media features with a marketplace where creators can sell products, services, and exclusive content, including consultations, video calls, and personalized responses.
My tasks included implementing a light theme and a new design for both the client and creator sides on desktop and mobile. I redesigned page layouts, created a mobile menu for creators, and handled missing designs by making UI decisions myself. Additionally, I fully developed the "Ask Me Anything" feature, enabling users to record and send video/audio messages.
Tech stack: React.js, Redux, Material UI, SCSS, react-audio-voice-recorder, react-audio-visualize.

NDA project - this is an employee's personal account where you can view scheduled events and documents related to this event in the calendar, view system and personal notifications, set up notification and document filters.
My task was to create the calendar interface, fetch data from the API, and configure the display of events in the calendar. Creating the necessary pages, setting up routing between pages.
Tech stack: Next.js, mobiscroll/react, react-pdf-viewer, reduxjs/toolkit, Antd, React.js, testing-library/react, Jest, Mocha, Selenium, SASS. Prettier, Typescript, Husky, Eslint

NDA project - it's Orchestration designer and engine. This is a low code platform for orchestration that does both orchestration (straight through

	processing) and workflow(workflow are long running and involve human intervention). Platform address the needs of business analysts, developers, deployment and testing teams. <i>I was responsible</i> for the layout; created a component that allows to display the stages of a process in a diagram, group the stages, track what data is received at each stage, change the data and connections between them. <i>Tech stack:</i> React.js, Redux, ReactFlow, Antd <i>TakeOff</i> – it is an application that can be used to determine how much building materials will be needed for construction/repair based on the drawings. <i>I was working</i> with uploaded drawings - measured scale, distances, calculated area, and calculated the amount of materials consumed. <i>Tech stack:</i> React.js, Redux, Three.js, Konva.js. <i>Vesta360</i> – it is a configurator application for creating a 3D visualization of a room and its design. This tool for interior designers allows you to implement any ideas from creating a room from scratch all the way through to printing the finished plan. <i>I was working</i> with 3D models, creating a furniture constructor, developing a wide range of functions for placing objects and interacting with them, using different textures, measuring distances, working with the site database. <i>Tech stack:</i> React.js, Redux, Three.js, React-Three-Fiber. <i>City-configurator</i> - the goal was to create a 3D campus configurator in WebGL. As a result, this configurator will be used to reconstruct a similar but higher-quality environment in Unreal Engine. <i>My scope of work:</i> to create a grid in which various objects from the building library can be placed, rotated, moved, and deleted. I also created visual effects and animations (roads between buildings, cars moving through them), resized and changed the appearance of the grid, and imported and exported data for later usage. <i>Tech stack:</i> React.js, Zustand, Three.js, React-Three-Fiber.
09/2019 – 08/2020	IT company, Ukraine <i>Fullstack JS developer</i> • Development of a job search website for freelancers in the field of naming and design; • Migration of data on the server from one database to another
2015 - 2019	Jewellery Network “Zolotoy Vek” <i>General shop manager</i>
2008 - 2015	Service in the internal affairs authorities

Technical skills and knowledge of programming libraries:

JS

- JavaScript
- ES6
- TypeScript

React

- React.js
- MaterialUI
- Antd
- ReactFlow
- React PDF Viewer
- Next.js
- react-audio-voice-recorder
- react-audio-visualize

State management

- Redux
- Redux-saga
- Redux-thunk
- Zustand

3D

- Three.js
- React-Three-Fiber

Knowledge of DB

- MSSQL
- PostgreSQL
- MongoDB

Other

- Konva.js
- Leva
- Formik
- (ts/es)lint
- Dagre
- Mobiscroll

Styles

- Sass
- Less
- Styled-components
- SCSS

Module bundlers/ task manager

- Webpack
- npm

Tests

- Jest
- Selenium
- React testing library
